Writing the draft is not where most of the money goes.

Listen, the expensive moments in a company's patent work happen before anyone writes a word, and after the law firm sends the draft back. One is a decision made on partial information; the other is a check nobody has an evening for.

$7,501 to $10,000

The most common budget band for one complete utility application, before government fees

58 percent

Of corporate respondents have the majority or all of their priority applications prepared by outside counsel

The decision, and the check

The two steps a drafting tool never touches; this is where a company actually spends

Source: IPO 2024 Corporate IP Practice Survey, 75 corporate respondents.

A drafting copilot sits beside one person. Patent work is spread across a building.

R&D has the idea. The IP team decides what deserves money. A law firm often writes it. So a tool that lives inside one editor sees one slice; the invention moves through three desks and two companies.

R&D captures

Engineers write what they have: a slide deck, a lab note, three paragraphs in an email. Eety interviews them for the rest.

IP decides

Search, assess, draft in-house or send it out, then review what comes back. The decisions live with the IP team.

Counsel drafts

Outside counsel work by email, as they always have. Their work is recorded on the same record; they never need a seat.

One record per invention, from capture to filing.

Think about the file a hospital keeps on a patient; every specialist writes on the same one. An invention gets its reference, like ACME-2026-0042, the moment it is captured, and every step lands on it.

- Captured
- Searching
- Drafting
- Counsel drafts
- In review
- Ready to file
- Filed

Needs a decision

Worked out from the data, never from a notification. Eleven kinds of decision, each with one button.

Nested work

A prior-art search and a counsel draft sit under the invention they belong to, under the same reference.

Six live stages today. Filed is reserved for prosecution, which comes next.

You would not build on land without a soil test.

Most companies draft patents that way anyway... pick a disclosure, spend the money, find out later the ground was crowded. So Eety does the soil test before the money moves.

90 percent

Understanding reached by interviewing the inventor, one question at a time

10 + 5

State-of-the-art queries: patent language and scholarly language

Low / Med / High

Density verdict: High at 4 or more high-scoring references, Medium at 2

$20

2 tokens, once per invention. Promote to a draft, or send it to counsel

A searcher who shows you every string, and says why.

A math teacher wants to see your working, not just the answer. The search works the same way: you approve the grading criteria first, then every string sits on the page with what it looks for and why.

11 steps

Analysis, criteria, known art, assignees, two keyword rounds, assignee and inventor searches, citations, non-patent literature, report

300

Results screened per string, at most; strings scoped to titles and abstracts, claims or full text

Word, Excel

A searcher-grade report with the matter reference in its name

$50

5 tokens per search, charged when you approve the criteria. Enabled per organization on request

A careful associate asks. A careless one guesses.

Eety drafts like the careful one. It will not write a word below 90 percent understanding; when a fact is missing it leaves a needs-input placeholder and asks your inventor, instead of inventing one.

11 templates

For 5 offices: USPTO, EPO, PCT/WIPO, UKIPO, IPO India

33

Drawing types, generated under the drawing rules of the office you chose

Library

Your granted patents become instructions, terminology, clauses and writing style, approved once

$50

5 tokens, once per matter. Redrafts on the same matter are free

A second reader for the draft your law firm sent back.

When a counsel draft lands, you either trust it or give up your evening to check it... most weeks there is no evening to give. So import the DOCX onto the invention's record and let the full legal review read every line.

Headings matched

Sections mapped automatically or by hand; India Form 2 detected on sight

Authority cited

Every finding quotes the text and the rule it rests on, such as 35 U.S.C. 112(b)

Word redline

Real tracked changes, every edit carrying the name of who made it

$30

3 tokens, once per matter. Your own drafts get the same review at no extra charge

Inventors are users. Outside counsel are not.

Two departments touch a patent, so Eety has the same two. What people see follows their role; counsel are recorded on the matter and never log in.

IP / Innovation

IP Head, IP Manager, Patent Attorney / Agent, IP Analyst, Paralegal. The IP team sees the whole portfolio.

R&D

R&D Head, Team Lead, Inventor, grouped in teams. An inventor sees their own inventions, and the searches and reviews on them, read-only.

External counsel

Assign a search or a draft with a due date. Overdue work shows on the dashboard; what comes back lands on the same record.

Our cloud, or your own servers.

Everything except the AI model and the search engines can run on your side. We say exactly what leaves, because "your data never leaves your network" would not be true of any AI product, ours included.

Stays inside your network

The application, the workers, the database, every file, every draft and report, the ledger and the audit trail. Nothing is sent to eety.

Three things leave, nothing else

- Google Gemini via Vertex AI: the text, documents, images and audio of each AI step
- Patent and literature databases via SerpApi: search strings and publication numbers only
- Public web pages, fetched during the literature steps of a prior-art search

No SOC 2 or ISO 27001 today. A DPA, the sub-processor list and a completed security questionnaire on request.

The price is on the page. Then try it on your own inventions.

One token is $10. Each service is charged once per matter, and a prior-art search per search; one pool for the organization, with a ledger of who spent what. No per-seat license.

$20	$10	$50	$50	$30
Harvesting	State of the art	Prior-art search	Full draft	Counsel-draft review

- **Week 1**

  Your organization, departments and five granted patents into the library.

- **Weeks 2 and 3**

  Ten disclosures, two searches and three counsel drafts, on your own matters.

- **Week 4**

  The read-out, with the ledger and the audit trail open.
